Evolutionary rates of basal iguanodontians around Jurassic-Cretaceous transition in Europe

Credit: Victor Carvalho (CC BY NC 4.0)

Objectivo: producing the first time-calibrated phylogeny of basal iguanodontian via Bayesian Inference and Maximum Parsimony, in order to elucidate systematic relationships within iguanodontian and test for macro-evolutionary hypotheses.

Duração: 01/01/2020 – 01/03/2024

Financiamento: FCT - Fundação para a Ciência e Tecnologia de Portugal

Membros do GeoBio Tec: Filippo Maria Rotatori, Miguel Moreno-Azanza and Octávio Mateus
